

Assignment:2

Session 1

❖ **Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).**

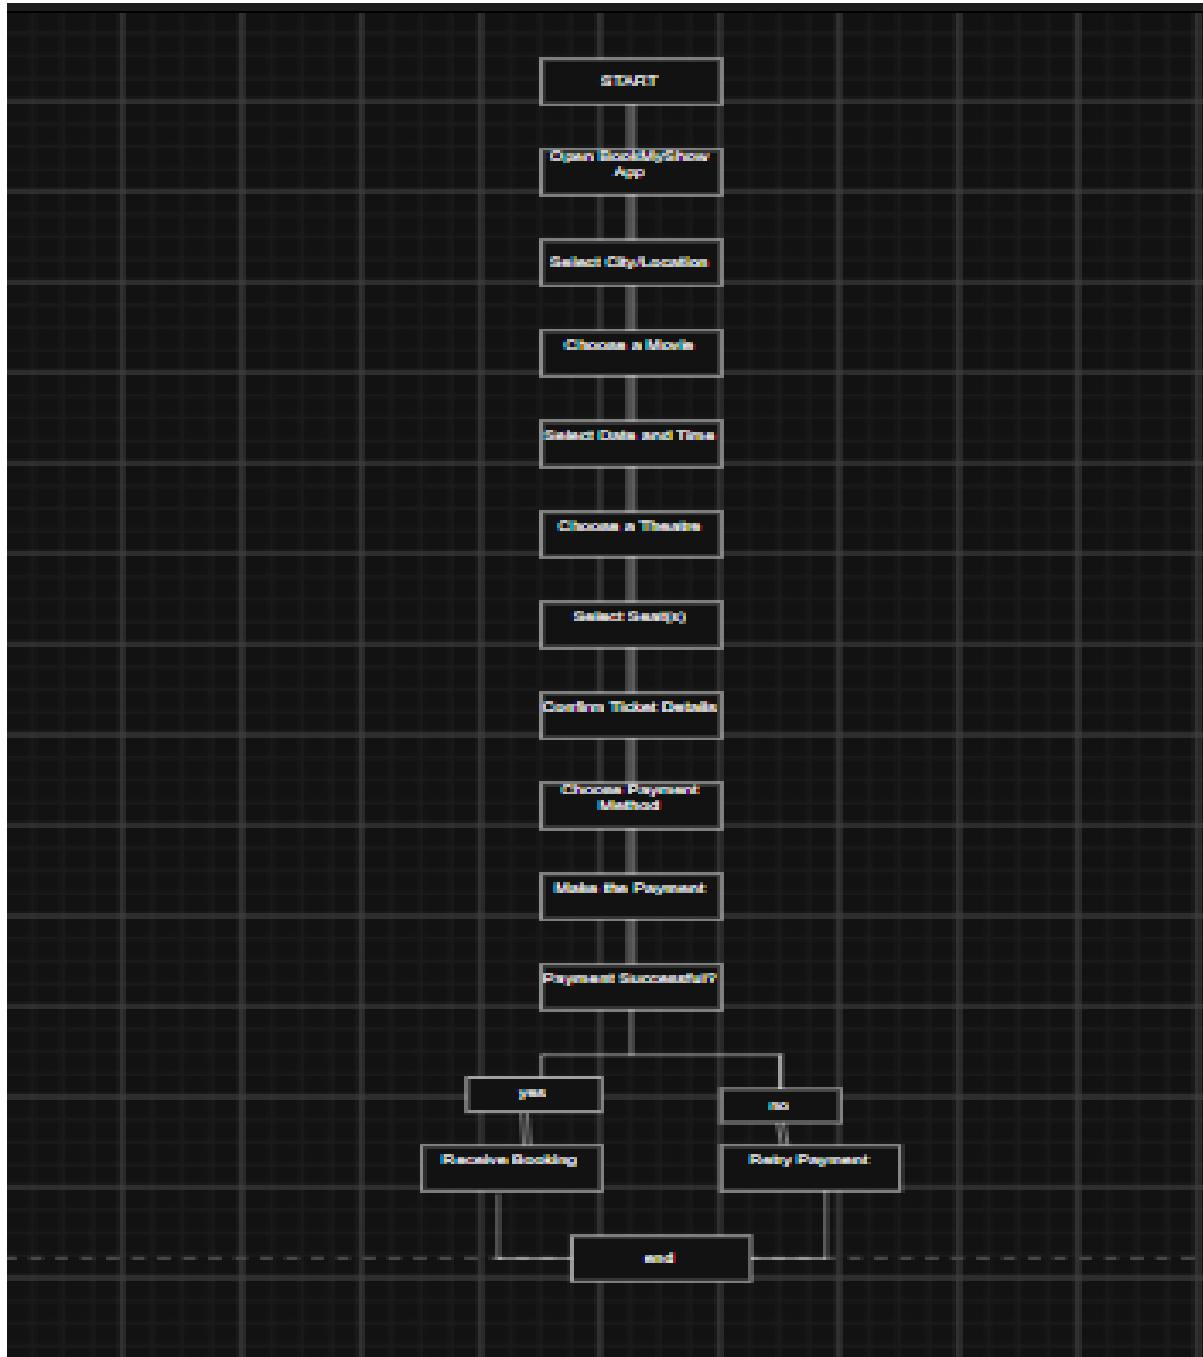

- A program is a set of instructions written by a programmer that tells a computer or mobile app how to perform specific tasks. It helps the device take input, process information, and produce the correct output. Programs are used in almost every digital device, such as computers, smartphones, ATMs, and websites, to make daily tasks easier and faster.
- **Example:** When you use Instagram, the program allows you to log in, view photos and reels, like and comment on posts, send messages, and receive notifications. It follows a set of instructions to display content based on your interests and keeps the app running smoothly.

❖ List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.

Hint: Think of languages like Java, Python, and JavaScript.

Programming Language	Compiled / Interpreted	Description
Java	Both	Java code is compiled into bytecode and then interpreted or compiled at runtime by the Java Virtual Machine (JVM).
Python	Interpreted	Python code is usually executed by an interpreter, making it easy to write and test programs quickly.
JavaScript	Both	JavaScript is interpreted by browsers and also uses Just-In-Time (JIT) compilation for faster execution.

❖ Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

❖ **Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.**

- **Algorithm: Ordering Food on Swiggy**

- Open the Swiggy app on your mobile phone.
- Log in or sign up if required.
- Allow location access or enter your delivery address.
- Search for a restaurant or food item.
- Select the restaurant from the list.
- Choose the food items you want to order.
- Tap Add to Cart for each item.
- Open the cart and review your order.
- Apply a coupon code if available.
- Tap Proceed to Payment.
- Select your preferred payment method (UPI, Card, Cash, Wallet, etc.).
- Complete the payment.
- Wait for the order confirmation and tracking details.
